

PROMPT 3

Type 1 -Overwrite

This architecture has one row per customer. When a customer moves, the old address is simply overwritten with the new one. No history is retained.

Columns: **address_id** , customer_id , street, city, province, postal_code

Type 2 -Retain History

This architecture has one row per address per time period. When a customer moves, the current row is closed by setting an end date and flagging is_current = 0. A new row is then inserted with the new address and is_current = 1. All previous addresses are preserved.

Columns: **address_id** , customer_id , street, city, province, postal_code, start_date, end_date, is_current
